

Chemical-structure taxonomy (ChemOnt)

what each molecule IS · root → 2 kingdoms → 31 superclasses · 4,825 classes, up to 11 levels
Showing the top families (superclasses); each splits further into finer classes down to level 11.

● Chemical entities (root)

● Organic compounds

- Acetylides
- Alkaloids and derivatives
- Allenes
- Benzenoids
- Carbenes
- Hydrocarbon derivatives
- Hydrocarbons
- Lignans, neolignans and related compounds
- Lipids and lipid-like molecules
- Nucleosides, nucleotides, and analogues
- Organic 1,3-dipolar compounds
- Organic Polymers
- Organic acids and derivatives
- Organic anions
- Organic cations
- Organic nitrogen compounds
- Organic oxygen compounds
- Organic salts
- Organic zwitterions
- Organohalogen compounds
- Organoheterocyclic compounds
- Organometallic compounds
- Organophosphorus compounds
- Organopnictogen compounds
- Organosulfur compounds
- Phenylpropanoids and polyketides

● Inorganic compounds

- Homogeneous metal compounds
- Homogeneous non-metal compounds
- Inorganic salts
- Miscellaneous inorganic compounds
- Mixed metal/non-metal compounds
