

Biological-target taxonomy (ChEMBL) — how many layers

what each molecule ACTS ON · 905 classes across 7 levels (root = level 0)

L0	root (Protein class)	 1
L1	group (the 15 top groups)	 15
L2	family (protein families)	 40
L3	deeper sub-family	 122
L4	deeper sub-family	 277
L5	deeper sub-family	 350
L6	deeper sub-family	 100

Example of one full path (root → leaf):

Protein class → Enzyme → Kinase → Protein Kinase → CMGC protein kinase group →
CMGC protein kinase CDK family → CMGC protein kinase CDC2 subfamily
