

ChEMBL target group: Adhesion

Protein class → this group → protein families ...

single leaf category (no sub-families)

● Adhesion

ChEMBL target group: Auxiliary transport protein

Protein class → this group → protein families ...

11 sub-families below in total · shown to depth 1

● Auxiliary transport protein

- Ankyrin family
- Basigin family
- Calcium channel auxiliary subunit alpha2delta family
- Calcium channel auxiliary subunit beta family
- Calcium channel auxiliary subunit gamma family
- Calcium-activated potassium channel auxiliary subunit gamma family
- Calcium-activated potassium channel auxiliary subunit slowpoke-beta family
- Fatty acid binding protein family
- Slow voltage-gated potassium channel accessory protein family
- Sodium channel auxiliary subunit beta family
- Voltage-gated potassium channel beta-subunit family

ChEMBL target group: Enzyme

Protein class → this group → protein families ...

481 sub-families below in total · shown to depth 1

● Enzyme

- Aminoacyltransferase (+1 deeper)
- Cytochrome P450 (+94 deeper)
- Hydrolase
- Isomerase
- Kinase (+202 deeper)
- Ligase
- Lyase (+3 deeper)
- Oxidoreductase
- Phosphatase (+7 deeper)
- Phosphodiesterase (+35 deeper)
- Protease (+127 deeper)
- Transferase

ChEMBL target group: Epigenetic regulator

Protein class → this group → protein families ...

33 sub-families below in total · shown to depth 3

● Epigenetic regulator

● Eraser

- Histone deacetylase
 - HDAC class I
 - HDAC class III
 - HDAC class IIa
 - HDAC class IIb
 - HDAC class IV
- Lysine demethylase
 - Jumonji domain-containing
 - Lysine-specific demethylase

● Reader

- Bromodomain
- Methyl-CpG-binding domain
- Methyl-lysine/arginine binding protein
 - Chromodomain
 - MBT domain
 - PWWP domain
 - Tudor domain
 - WDR domain
- Plant homeodomain
- Spindlin domain
- YEATS domain

● Writer

- DNA methyltransferase
- Histone acetyltransferase
 - GNAT family
 - MYST family
 - SRC family
 - p300/CBP family
- Protein methyltransferase
 - PR domain
 - Protein arginine methyltransferase
 - SET domain

ChEMBL target group: Ion channel

Protein class → this group → protein families ...

85 sub-families below in total · shown to depth 2

● Ion channel

● Ligand-gated ion channel

- 5HT3 receptor
- Acid-sensing ion channel
- Epithelial sodium channel
- GABA-A receptor
- Glutamate-gated chloride channel (invertebrate)
- Glycine receptor
- IP3 receptor
- Ionotropic glutamate receptor (+5 deeper)
- Nicotinic acetylcholine receptor (+5 deeper)
- P2X receptor
- Ryanodine receptor
- Zinc-activated channel

● Other ion channel

- Annexin
- Aquaporin (+4 deeper)
- Chloride channel (+5 deeper)
- Gap junction protein (+6 deeper)
- Miscellaneous ion channel (+21 deeper)
- Mitochondrial and plastid porin family (+1 deeper)
- Nuclear pore complex family
- Paracellular channels (+1 deeper)
- Phospholemman family
- Pore-forming toxins (proteins and peptides)
- Vesicle fusion pores

● Voltage-gated ion channel

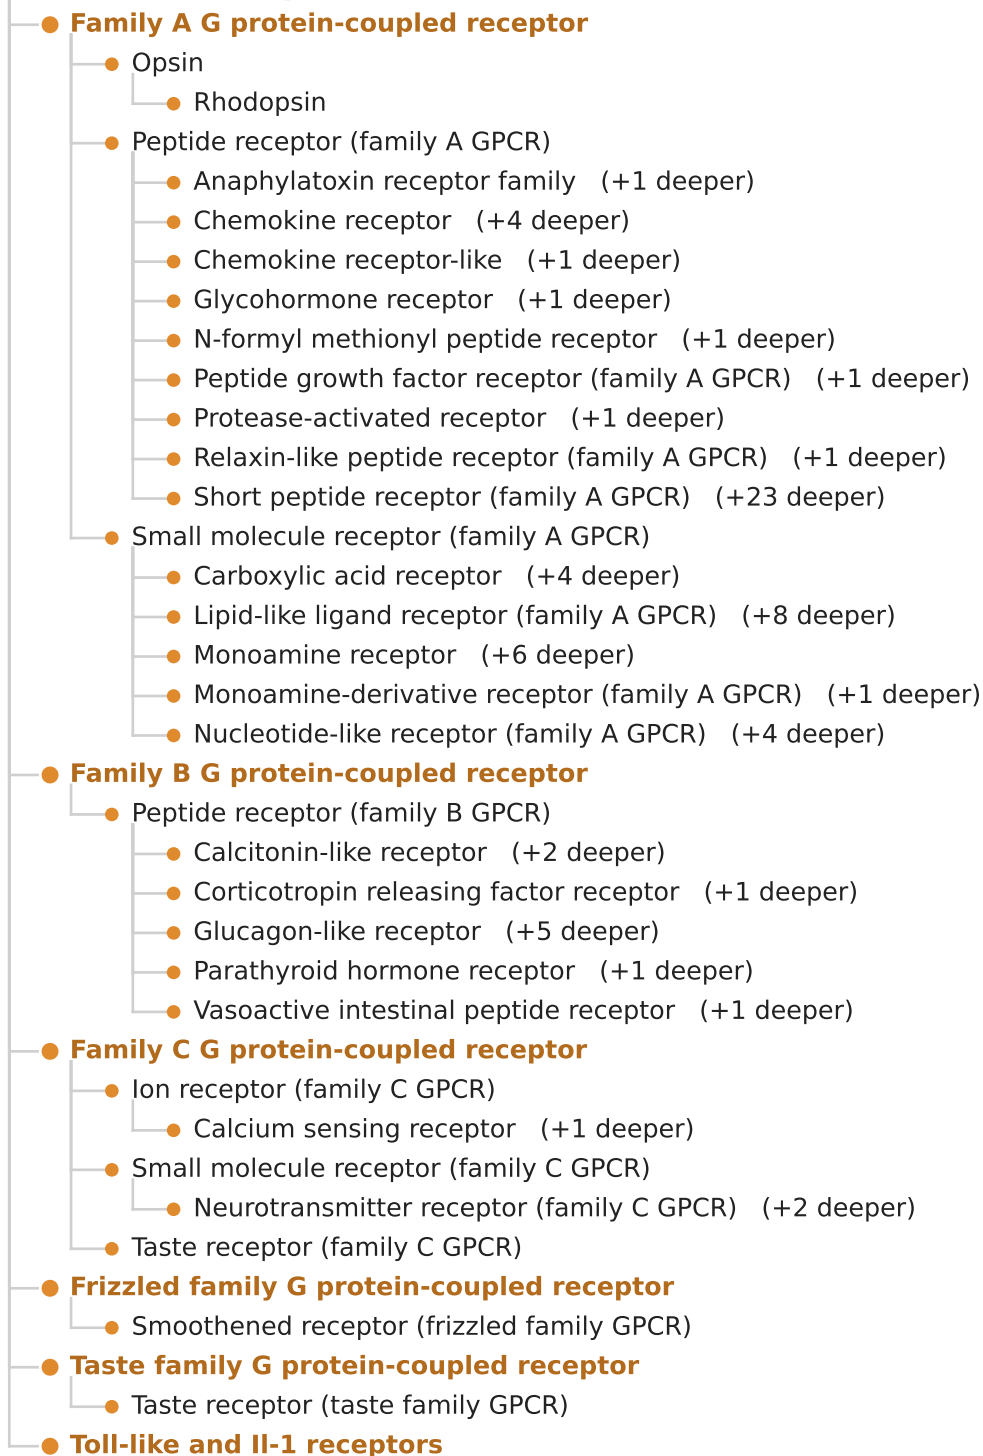

- CatSper and Two-Pore channels
- Cyclic nucleotide-regulated channel
- Potassium channels (+4 deeper)
- Transient receptor potential channel
- Voltage-gated calcium channel
- Voltage-gated proton channel
- Voltage-gated sodium channel

ChEMBL target group: Membrane receptor

Protein class → this group → protein families ...

107 sub-families below in total · shown to depth 3

● Membrane receptor

ChEMBL target group: Other cytosolic protein

Protein class → this group → protein families ...

single leaf category (no sub-families)

- **Other cytosolic protein**

ChEMBL target group: Other membrane protein

Protein class → this group → protein families ...

single leaf category (no sub-families)

● Other membrane protein

ChEMBL target group: Other nuclear protein

Protein class → this group → protein families ...

single leaf category (no sub-families)

- **Other nuclear protein**

ChEMBL target group: Secreted protein

Protein class → this group → protein families ...

single leaf category (no sub-families)

- **Secreted protein**

ChEMBL target group: Structural protein

Protein class → this group → protein families ...

single leaf category (no sub-families)

- **Structural protein**

ChEMBL target group: Surface antigen

Protein class → this group → protein families ...

single leaf category (no sub-families)

● Surface antigen

ChEMBL target group: Transcription factor

Protein class → this group → protein families ...

73 sub-families below in total · shown to depth 3

● Transcription factor

● Nuclear receptor

- Nuclear hormone receptor subfamily 0
 - Nuclear hormone receptor subfamily 0 group B (+2 deeper)
- Nuclear hormone receptor subfamily 1
 - Nuclear hormone receptor subfamily 1 group A (+2 deeper)
 - Nuclear hormone receptor subfamily 1 group B (+3 deeper)
 - Nuclear hormone receptor subfamily 1 group C (+3 deeper)
 - Nuclear hormone receptor subfamily 1 group D (+2 deeper)
 - Nuclear hormone receptor subfamily 1 group F (+2 deeper)
 - Nuclear hormone receptor subfamily 1 group H (+3 deeper)
 - Nuclear hormone receptor subfamily 1 group I (+3 deeper)
- Nuclear hormone receptor subfamily 2
 - Nuclear hormone receptor subfamily 2 group A (+1 deeper)
 - Nuclear hormone receptor subfamily 2 group B (+3 deeper)
 - Nuclear hormone receptor subfamily 2 group C (+2 deeper)
 - Nuclear hormone receptor subfamily 2 group E (+2 deeper)
 - Nuclear hormone receptor subfamily 2 group F (+3 deeper)
- Nuclear hormone receptor subfamily 3
 - Nuclear hormone receptor subfamily 3 group A (+2 deeper)
 - Nuclear hormone receptor subfamily 3 group B (+3 deeper)
 - Nuclear hormone receptor subfamily 3 group C (+4 deeper)
- Nuclear hormone receptor subfamily 4
 - Nuclear hormone receptor subfamily 4 group A (+3 deeper)
- Nuclear hormone receptor subfamily 5
 - Nuclear hormone receptor subfamily 5 group A (+2 deeper)
- Nuclear hormone receptor subfamily 6
 - Nuclear hormone receptor subfamily 6 group A (+1 deeper)

ChEMBL target group: Transporter

Protein class → this group → protein families ...

99 sub-families below in total · shown to depth 2

● Transporter

● Electrochemical transporter

- 4 TMS multidrug endosomal transporter family
- Amino acid-polyamine-organocation family
- Aromatic acid:H⁺ symporter family
- Arsenite-antimonite efflux family
- Drug/metabolite transporter superfamily
- Glycoside-pentoside-hexuronide:cation symporter family
- Lysosomal cystine transporter family
- Mitochondrial inner membrane K⁺/H⁺ and Ca²⁺/H⁺ exchanger family
- Mitochondrial pyruvate carrier family
- Mitochondrial tricarboxylate carrier family
- Monovalent cation:proton antiporter-2 family
- Multidrug/oligosaccharidyl-lipid/polysaccharide flippase superfamily
- Reduced folate carrier family
- SLC superfamily of solute carriers (+54 deeper)
- Vesicular neurotransmitter transporter family
- Vitamin A receptor/transporter family

● Group translocator

● Primary active transporter

- ATP-binding cassette (+7 deeper)
- Endoplasmic reticular retrotranslocon family
- F-type and V-type ATPases (+2 deeper)
- General secretory pathway family
- Mitochondrial protein translocase family
- Nuclear mRNA exporter family
- Oxidoreduction-driven transporters
- P-type ATPase (+6 deeper)
- Peroxisomal protein importer family
- TMS recognition/insertion complex family

● Transmembrane 1-electron transfer carriers

ChEMBL target group: Unclassified protein

Protein class → this group → protein families ...

single leaf category (no sub-families)

- **Unclassified protein**
